Course Overview

Artificial intelligence (AI) and machine learning (ML) have become essential parts of the toolset for many organizations. When used effectively, these tools provide actionable insights that drive critical decisions and enable organizations to create exciting, new, and innovative products and services. This course shows you how to apply various approaches and algorithms to solve business problems through AI and ML, all while following a methodical workflow for developing data-driven solutions.

About This Course

Artificial intelligence (AI) and machine learning (ML) have become essential parts of the toolset for many organizations. When used effectively, these tools provide actionable insights that drive critical decisions and enable organizations to create exciting, new, and innovative products and services. This course shows you how to apply various approaches and algorithms to solve business problems through AI and ML, all while following a methodical workflow for developing data-driven solutions.

Who Should Attend

The skills covered in this course converge on four areas—software development, IT operations, applied math and statistics, and business analysis. Target students for this course should be looking to build upon their knowledge of the data science process so that they can apply AI systems, particularly machine learning models, to business problems. So, the target student is likely a data science practitioner, software developer, or business analyst looking to expand their knowledge of machine learning algorithms and how they can help create intelligent decisionmaking products that bring value to the business. A typical student in this course should have several years of experience with computing technology, including some aptitude in computer programming. This course is also designed to assist students in preparing for the CertNexus® Certified Artificial Intelligence (AI) Practitioner (Exam AIP-210) certification

Learning Outcomes

Upon successful completion of this course, participants will be able to:

In this course, you will develop AI solutions for business problems.

You will:

Solve a given business problem using AI and ML.

Prepare data for use in machine learning.

Train, evaluate, and tune a machine learning model.

Build linear regression models.

Build forecasting models.

Build classification models using logistic regression and k -nearest neighbor.

Build clustering models.

Build classification and regression models using decision trees and random forests.

Build classification and regression models using support-vector machines (SVMs).

Build artificial neural networks for deep learning.

Put machine learning models into operation using automated processes.

Maintain machine learning pipelines and models while they are in production

Additional Course Details

Nexus Humans CertNexus Certified Artificial Intelligence Practitioner CAIP (AIP-210) training program is a workshop that presents an invigorating mix of sessions, lessons, and masterclasses meticulously crafted to propel your learning expedition forward.

This immersive bootcamp-style experience boasts interactive lectures, hands-on labs, and collaborative hackathons, all strategically designed to fortify fundamental concepts.
